MATERIALS

Balancing your brand's vision with package compatibility can have a large impact on the materials used for your packaging. APC Packaging offers a wide range of materials that can be used in packaging from plastic, PCR and glass to aluminum and even bamboo. Experienced APC Packaging consultants provide guidance on material selection and decorations based on your brand requirements.

PP Polypropylene

PP is typically white, but is also available in clarified grades with excellent contact clarity. PP is offered in a wide range of properties that enable it to be used for products with high heat, chemical resistance & impact requirements as well as long term dimensional stability needs. PP is the third most widely produced commodity plastic (after PE) and it is often used in packaging and labeling.

PE Polyethylene

PE is one of the most widely produced plastics in the world. It is available in linear low-density polyethylene (LLDPE), low density (LDPE), medium density (MDPE) and high density (HDPE). From soft and flexible to hard and sturdy, the various grades of polyethylene offer a wide range of properties that can be utilized based on your packaging requirements.

PET Polyethylene Terephthalate

PET is the most recycled material in the world and features excellent clarity and chemical resistance. This material can be utilized in several processes such as injection molding, blow molding, injection blow molding (IBM) and injection stretch blow molding (ISBM).

PETG/PCTA/ PCTG Co-polymers

These materials are amorphous co-polymer thermoplastics with above average chemical resistances when compared to other amorphous materials such as ABS or PMMA. They have excellent physical properties for a wide variety of packaging types and offer superior clarity over clarified PP.

PMMA Poly Methyl Methacrylate

PMMA, also known as acrylic, is a transparent thermoplastic often used as a lightweight or shatter-resistant alternative to glass. Its commonly used as an outer jar or outer bottle due to its high clarity. PMMA is also referred to as plastic glass.

ABS

Acrylonitrile Butadiene Styrene

ABS is an alloy type material that brings high gloss, impact resistance and good mold-ability due to its three main components. ABS decorates very easily in any of the many decoration processes available. ABS plastic is recyclable, having strong impact resistance, heat and acid chemical resistance.

AS/SAN

Acrylonitrile Styrene

AS/SAN, the predecessor of ABS, has a good combination of rigidity, strength, toughness and transparency.

ALUMINUM

Not only is aluminum strong at eliminating unwanted environmental factors, it is also flexible enough that it can take on whatever shape the primary package calls for while giving products a luxurious look and feel.

GLASS

Glass is a non-crystalline amorphous solid that is often transparent. Glass can be molded and decorated in statement-making ways. Glass also offers excellent chemical resistance and barrier properties for packaging.

BAMBOO

Bamboo and wood are natural and renewable materials that can be used as a nice statement piece in your packaging. Bamboo accents can be used to convey an eco-friendly product.

PCR

Post-Consumer Recycle

When a material or product has served its intended use and has been recovered from waste destined for disposal, it is then considered post-consumer. The product has fulfilled its purpose and can now be recycled into a new product.

SUSTAINABILITY

When referring to packaging, sustainability involves increased life cycle inventory and life cycle assessment to help reduce environmental impacts and the ecological footprint. APC Packaging can work with you to ensure that your packaging meets your sustainability requirements.

SALES PROCESS

APC Packaging has simplified the sales process, so you know exactly where you are in the progression of your order. Our skilled sales representatives will guide you through the entire process of perfecting the art of packaging.

STEP 1

WORK WITH OUR TEAM

Consult with your sales representative to determine the best solution for the components that you desire. Our representatives will discuss the various decoration and printing options, lead times and quotes. Vector outlined artwork (PDF, AI or EPS) files will be requested for your custom decoration and printing needs. In stock samples can also be sent for your review and testing.

STEP 2

ORDER YOUR SAMPLES

Once the provided technical drawings and die-lines are approved, you can place a sample order for a fully decorated physical sample to evaluate.

STEP 3

PLACE YOUR ORDER

When the physical sample is approved, you will be able to submit your purchase order for decorated pre-production samples or a mass production order. An order confirmation & artwork proof(s) will be given at this time for review & approval.

STEP 4

GIVE US YOUR APPROVAL

Fully decorated pre-production samples will be sent for approval. Once approval is given, you will receive an estimated completion date for production and be able to review freight options for your shipment.

STEP 5

RECEIVE YOUR ORDER

Congratulations! You've now perfected the art of packaging and are ready to impress your customers.
